

# **ALCOHOL AND DRUG ABUSE PREVENTION AND CONTROL PROGRAM (ADAPCP) FY 98 CORPORATE REPORT**

---

## **FINANCIAL PERFORMANCE**

FY 98 VCND Budget	\$186.8K
Executed	\$224.0K
Rate	83%

## **PROGRAM USAGE**

### **URINALYSIS TESTING**

Urine testing continued to be the most popular illegal drug prevention program by commanders. A total of 11,745 tests were conducted among MDW units in FY 98. Of that, 74 were returned positive for a positive rate of 0.63%, compared to an overall Department of the Army average of 0.91% during the same period. Units were encouraged to implement "smart testing" by testing on weekends and in random patterns to discourage the use of illegal drugs.

## **PREVENTION / EDUCATION**

Prevention and education efforts were conducted at every MDW installation. Each installation conducted a 40-hour unit alcohol and drug coordinator (UADC) course to train unit non-commissioned officers in urine collection procedures. Each installation had a full-time CPC to coordinate with management employee relations and supervisors who worked with civilians, family members, or retirees with personal problems affecting their jobs or family lives. CPC did initial

assessments and referred clients to appropriate agencies for help.

### **SMOKING CESSATION**

Smoking of tobacco products was not permitted in any MDW workplace. Smoking was only permitted in limited areas outside the work area in occupied buildings. The Alcohol and Drug Control Office and military hospitals offered over 45 classes to employees and family members in smoking cessation.

### **COUNTER-NARCOTICS PROGRAM**

Funds were used to support installation programs to reduce alcohol abuse and illegal use of drugs. An Installation Biochemical Testing Coordinator (IBTC) was contracted at Fort Hamilton. Other initiatives included health promotion items and funding for Better Opportunities for Single Soldier (BOSS) trips.

### **NEW REGULATION**

In May 1997 the MACOM Alcohol and Drug Control Officers met to finalize the revision of Army Regulation 600-85 (Army Drug and Alcohol Prevention and Control Program - ADAPCP). It is expected to be published during the second quarter of FY99. The major change to this regulation is the expanded testing of department of the Army civilians.

## **SUMMARY**

The MDW ADAPCP continues to be a well-respected commander's program geared at preventing the abuse of alcohol and other drugs. Current urine testing results show MDW soldiers tested approximately half of the total Department of the Army positive rate for FY 98

## **AHEAD IN FY 99 and BEYOND**

Funding will again be given to each installation to fund Army Math and Science Summer Camp 2000 in FY99. This program provided sixth, seventh, and eight-grade students exposure to math and science in a one-week day camp experience. Classes in drug prevention were presented throughout the week by trained ADAPCP staff.

MDW Safety, ADAPCP, Provost Marshal, and Public Affairs Office will coordinate a 1999 summer safety program emphasizing safety in aspects of work and play.
